

Programming Refresher

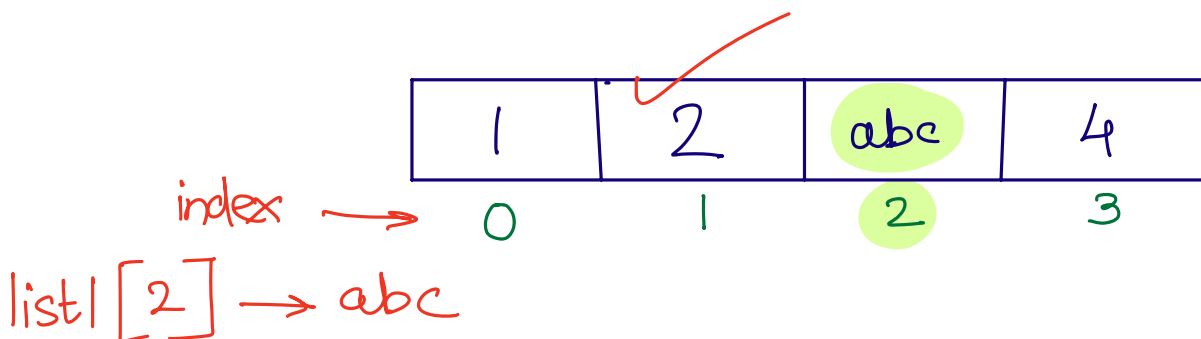

Trainer: Prashant Nair

Python

- Datatypes
- User Interactions
- Strings
- File Handling
- Decision statements
- Loops
- Functions
- Error Handling

```
list1 = [1, 2, 'abc', 4]
```

1	2	3	4	5	6	7	8	9	10
0	1	2	3	4	5	<u>6</u>	7	8	9

$\text{varName} [\text{startIndex} : \text{upperBound}]$

3
7

 $\rightarrow \text{endIndex} + 1$
 $6 + 1$

$\text{varName} [3:7]$
